In the following C++ function, let n >= m.

```cpp
int gcd(int n, int m) {
        if (n%m ==0) return m;
        if (n < m) swap(n, m);
        while (m > 0) {
            n = n%m;
            swap(n, m);
        }
        return n;
}
```
